**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

1. Claim 1 recites the limitation "the silicon-steel plate". There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 rejected under 35 U.S.C. 103(a) as being unpatentable over **Ho 6,121,710** in view of **Hornig 4,987,331**.

**H0'710** discloses a silicon-steel structure motor comprising; an integrally formed by a magnetic material (71,70 - 31,30); a silicon-steel plate (7,3 Fig. 2) having main body (5); a plurality of tooth portion formed on top side and bottom side of the main body (30,70 Fig. 2); the tooth portions being bent vertically with respect to the main body and the main body being rolled to form cylindrical shape (3, 7 fig. 2); the tooth portions are formed on top side and bottom side of the main body with equal pitch( 7,3 Fig 2 ).

**Ho'710** teaches all limitation of the claim except only a silicon-steel structure of motor with a plurality of additional silicon-steel plates stacked on top and bottom surface of the silicon-steel plates.

**Horng'331** discloses a motor with silicon-steel structure having a plurality of additional silicon plate (2.3 column 2 line 23 Fig. 1)

Therefore it would have been obvious to combine additional silicon-steel- plates taught by **Horng'331** with **HO'710** motor to generate a stronger magnetic field so that the rotor achieve higher torque.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- I. US patent 5,945,765-stator assembly for a brushless motor
- II. US patent 6,222,286 B1 Stepping motor
